## Using Medical Marijuana Safely

Many in Florida are choosing to use cannabis-containing products for medical purposes. What you might not know is that these products can be dangerous for children. Poison control centers are treating small children who've eaten a family member's gummies and needed to be hospitalized. The more concentrated the product and the smaller the child, the greater the danger. If a child gets into your medicine, your poison control center can help. Calls are free & confidential!

## Secure All Medications

- Keep all medicines out of reach and out of sight.
- Don't take medicine in front of children.
- Call the Poison Help line if anyone takes the wrong medicine, or too much.
- Don't wait for symptoms; the effects of edibles can be delayed.
